

1)ByteExample:

```
public class ByteExample{
    public byte getByteValue() {
        return 125;
    }

    public static void main(String[] args) {
        ByteExample obj = new ByteExample();
        byte result = obj.getByteValue();
        System.out.println("Byte value: " + result);
    }
}
```

2)Short Example:

```
public class ShortExample {
    public short getShortValue() {
        return 32000;
    }

    public static void main(String[] args) {
        ShortExample obj = new ShortExample();
        short result = obj.getShortValue();
        System.out.println("Short value: " + result);
    }
}
```

3)Int Example:

```
public class IntExample {
    public int getIntValue() {
        return 345627;
    }

    public static void main(String[] args) {
        IntExample obj = new IntExample();
        int result = obj.getIntValue();
        System.out.println("Int value: " + result);
    }
}
```

4)Long Example:

```
public class LongExample {
    public long getLongValue() {
        return 345234567234L;
    }
}
```

```
public static void main(String[] args) {  
    LongExample obj = new LongExample();  
    long result = obj.getLongValue();  
    System.out.println("Long value: " + result);  
}  
}
```

5)Float Example:

```
public class FloatExample {  
    public float getFloatValue() {  
        return 3.14f;  
    }  
  
    public static void main(String[] args) {  
        FloatExample obj = new FloatExample();  
        float result = obj.getFloatValue();  
        System.out.println("Float value: " + result);  
    }  
}
```

6) Double Example:

```
public class DoubleExample {  
    public double getDoubleValue() {  
        return 3.14159245;  
    }  
  
    public static void main(String[] args) {  
        DoubleExample obj = new DoubleExample();  
        double result = obj.getDoubleValue();  
        System.out.println("Double value: " + result);  
    }  
}
```

7)Char Example:

```
public class CharExample {  
    public char getCharValue() {  
        return 'a';  
    }  
  
    public static void main(String[] args) {  
        CharExample obj = new CharExample();  
        char result = obj.getCharValue();  
    }  
}
```

```
        System.out.println("Char value: " + result);
    }
}
```

8) Boolean Example:

```
public class BooleanExample {
    public boolean getBooleanValue() {
        return true;
    }

    public static void main(String[] args) {
        BooleanExample obj = new BooleanExample();
        boolean result = obj.getBooleanValue();
        System.out.println("Boolean value: " + result);
    }
}
```

9)String Example:

```
public class StringExample {
    public String getStringValue() {
        return "Hello java";
    }

    public static void main(String[] args) {
        StringExample obj = new StringExample();
        String result = obj.getStringValue();
        System.out.println("String value: " + result);
    }
}
```
