

1)ASCII Values:

```
public class ASCII {
    public void valuesOfCharacters(){
        for(char ch='A';ch<='Z';ch++){
            System.out.println("ASCII value of"+ch+"="+ (int)ch);
        }
    }
    public static void main(String args[]){
        ASCII obj=new ASCII();
        obj.valuesOfCharacters();
    }
}
```

2)Least Common Multiple:

```
public class LCM {
    public void leastCommonMultiple(){
        int num1=12;
        int num2=18;
        int lcm=0;
        for(int i=num1; ;i++){
            if((i%num1==0)&&(i%num2==0)){
                lcm=i;
                break;
            }
        }
        System.out.println("Least common multiple of two numbers is:"+lcm);
    }
    public static void main(String args[]){
        LCM obj=new LCM();
        obj.leastCommonMultiple();
    }
}
```
